

## QUALITY STANDARD

# Quality & Inspection Standard

Inspection, traceability and pre-shipment verification framework for magnetic materials and assemblies.

## Incoming and material verification

Material and magnetic performance are verified according to the agreed control plan and product requirements.

## Dimensional inspection

Critical dimensions are inspected using gauges, optical measurement or coordinate measurement as applicable.

## Magnetic verification

Surface field, flux, pole pattern or material magnetic properties are checked according to the product and drawing.

## See Before We Ship

Pre-shipment inspection video can show the actual batch, equipment, process and live readings when agreed with the customer.

## Documentation

Inspection reports, traceability and project-specific quality documents are available according to agreed project requirements.

## Engineering note

Values are reference specifications unless explicitly stated as guaranteed on a quotation or approved drawing. Final grade, geometry, tolerance, coating, magnetization, operating temperature and validation requirements must be confirmed for the actual application.
